

Destination Stewardship Roadmap

2025–2030

IBEROSTAR
GROUP

About the Roadmap

In 2020, Iberostar Group publicly committed to leading responsible tourism across our global hotel portfolio, with a focus on protecting and restoring oceans, ecosystems, and destinations. This commitment is driven by Iberostar Wave of Change—the tourism industry’s first innovation hub dedicated to developing transformational strategies for a sustainable ocean economy. Our approach aligns with the UN Sustainable Development Goals (SDGs) and is recognized as one of the most ambitious sustainability initiatives in the travel and tourism sector.

Since launching Wave of Change, we have achieved significant milestones, including eliminating single-use plastics, diverting 31,961 tons of waste from landfills, improving sustainable seafood sourcing, and advancing coral reef and coastal ecosystem restoration. These efforts contribute to our decarbonization strategy, validated by the Science-Based Targets initiative (SBTi), positioning us to achieve carbon neutrality by 2030—20 years ahead of the tourism industry’s Glasgow Declaration commitment.

Over the past five years, our progress has demonstrated the effectiveness of

science-based solutions, multi-sector collaboration, and community involvement. Recognizing the need for these elements to work in tandem to achieve our ambitious 2030 goals, we established the Destination Stewardship (DS) Area. This initiative aims to align our work with local destination priorities, foster cross-sector collaboration, and strengthen community engagement.

The DS Team serves as an extended support unit, providing new knowledge and solutions to our hotels while scaling successful Iberostar-tested models within destinations. By collaborating with public and private stakeholders, the team addresses broader sustainability challenges, builds destination alliances, and drives regenerative tourism strategies that promote long-term resilience and revitalization.

This roadmap will guide Iberostar’s destination stewardship strategies over the next five years, aligning with our broader efforts in circular economy, nature, blue foods, and climate action. We hope it also serves as a valuable resource for other companies and destinations striving to advance sustainable tourism and stewardship in coastal communities.

Our commitment to Destination Stewardship

As a global company, we recognize that destination stewardship demands more than traditional corporate responsibility. We aim to lead by example, forming innovative partnerships and allocating resources to develop and scale sustainability solutions. Our goal is to ensure that tourism contributes actively to the revitalization and long-term resilience of the destinations we are privileged to serve.

In this roadmap, we define “destination” as a geographic region characterized by shared stakeholders, institutions, legislation, and environmental and social contexts. “Destination stewardship” refers to a governance approach that balances the economic, environmental, social, and cultural needs of a place. It requires collaboration between the public and private sectors and local communities to ensure tourism not only respects but actively supports the destinations where we operate. To put this vision into action, we established the DS Area to foster collaboration with key stakeholders in targeted

destinations, that means that priorities can vary over time, so the strategy must adjust in each destination according to the current needs. By integrating community priorities into private sector strategies, we aim to align interests, develop impactful partnerships, and implement shared solutions that drive positive change.

With over 100 properties across Europe, Africa, and the Americas, Iberostar’s impact on the well-being of local ecosystems and communities is significant. This responsibility calls for a long-term commitment to preserving the health of the environments and societies surrounding our hotels. A recent survey of 80 Iberostar employees revealed that 92% view destination stewardship as essential, with concerns focused on waste management, climate risks, and water quality. This is complemented by materiality assessments performed in five countries where Iberostar has a presence and has been used to identify our strengths, weaknesses, opportunities, and threats in advancing destination stewardship. By addressing these priorities, we ensure that destination communities and ecosystems remain vibrant, healthy, and resilient.

Through materiality assessments and surveys involving 80 employees, we identified our strengths, weaknesses, opportunities, and threats in advancing destination stewardship.

Our goal is clear: to deepen our understanding of destination priorities and leverage both internal and external partner resources to achieve ambitious sustainability goals. Over the next five years, the DS Team will focus on building shared solutions and actions to steward the destinations that sustain us.

Strategy and approach

Purpose

We believe that by creating multi-sector alliances and engaging communities, we can ensure that tourism protects and regenerates destinations, aligning business growth with the long-term resilience of local communities and their surrounding ecosystems.

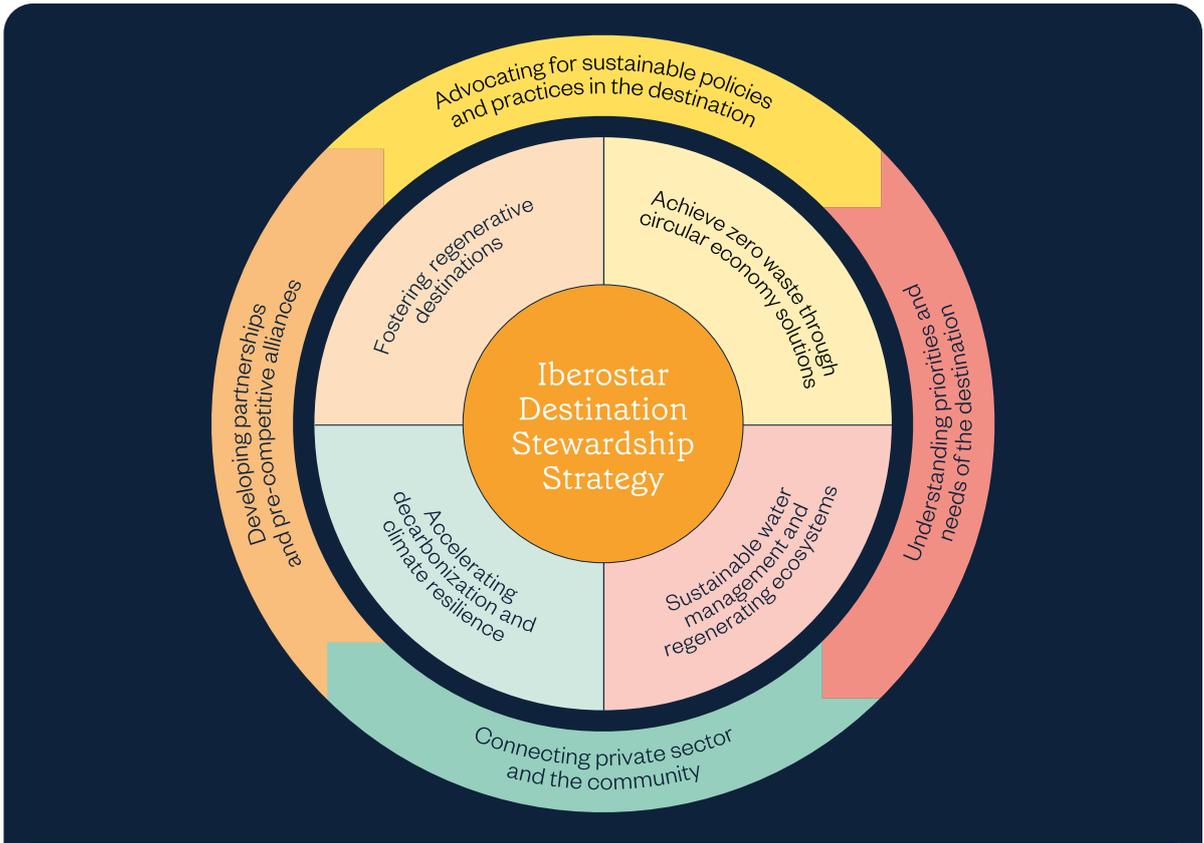

Mission

The DS Team supports Iberostar hotels in achieving sustainability objectives by forming and maintaining destination alliances and fostering pre-competitive partnerships for the implementation of regenerative tourism strategies that improve and revitalize destinations.

Vision

To be a global leader in responsible destination management, fostering multi-sector alliances and active community engagement to ensure that tourism not only protects but also regenerates destinations

Overarching pillars

Understanding priorities and needs of the destination

The DS Team identifies destination-specific sustainability challenges and opportunities through materiality assessments and stakeholder engagement. By understanding local priorities and expectations, we develop strategies that benefit both our hotels and the wider community.

Connecting private sector and the community

The DS Team fosters collaborative relationships between hotels and local communities to co-create solutions for sustainability challenges. By integrating local knowledge and addressing community needs, we implement programs that align with shared goals and enhance community well-being.

Developing partnerships and pre-competitive collaboration by engaging private and public partners

The DS Team engages with private and public partners to build multi-sector alliances that address complex issues such as waste management, resource efficiency, and ecosystem restoration. These collaborations enable us to create a greater impact and deliver shared solutions across destinations.

Advocating for sustainable policies and practices in the destination

The DS Team works with government agencies and industry partners to promote sustainable policies and practices that benefit destinations. Our advocacy efforts focus on aligning business operations with broader environmental and socio-economic objectives to drive lasting positive change.

Focus areas

The DS Team is committed to achieving Iberostar's 2030 Agenda goals through four strategic Focus Areas, aligned with our other roadmaps.

Achieving zero waste through circular economy solutions

We identify and implement destination-level solutions to eliminate or transform waste, ensuring that no materials end up in landfills. By collaborating with local partners, we establish systems that repurpose or recycle waste, transforming it into valuable resources.

Sustainable water management and regenerating ecosystems

Our approach integrates sustainable water practices with large-scale ecosystem restoration efforts. By connecting our hotels to regional restoration initiatives, we work at the ecosystem level to restore habitats, enhance biodiversity, and ensure water security in destinations.

Accelerating decarbonization and climate resilience

We collaborate with local communities to identify opportunities for carbon capture projects and promote climate adaptation measures. By investing in innovative solutions, we support the Climate Action Department to reduce emissions, build resilience, and contribute to long-term climate stability in vulnerable coastal destinations.

Fostering regenerative destinations

Through our Lifting Up Local framework for Responsibly Sourced Seafood, we promote a holistic approach to tourism that benefits both people and nature. We extend regenerative practices beyond our hotels, collaborating with industry partners to create vibrant, sustainable destinations that can thrive for generations.

1

Achieving zero waste through circular economy solutions

Iberostar has made significant progress toward achieving zero waste to landfill by 2025 and carbon neutrality by 2030, as part of a broader sustainability strategy to protect and regenerate destinations. Guided by our **Circular Economy Roadmap**, we have already diverted or eliminated 78% of waste through innovative solutions, including:

- The elimination of all single-use plastics in our hotels since 2020.
- The establishment of a dedicated **3R (Reduce, Reuse, Recycle) department**.

In 2024, we reached **0.48 kg of waste per stay**, reducing 0.19 kg of waste per stay compared to 2023.

To sustain and expand zero-waste practices across all destinations, we are building strong collaborations with local partners and communities to develop, test, and scale business and infrastructure solutions. For example, our **Circular Familial Farms initiative in Tunisia** converts hotel waste into livestock feed, providing local economic benefits while closing the waste management loop.

The **Destination Stewardship (DS) Team** plays a pivotal role in scaling these solutions to enhance hotel operations and transform waste into valuable resources for local communities. This approach supports Iberostar's sustainability goals while reinforcing the resilience and long-term sustainability of the destinations where we operate.

2030 Circular economy strategy

Achieve zero waste to landfill

Evolving operations towards circularity

Contributing to regenerative destinations

Driving partnerships through the value chain

1.1 2030 Targets

1.1
Partnership agreements with other hotels, NGOs, and local governments are established where destination collaboration is essential to divert all waste generated by hotels away from landfills.

1.2
Evaluated zero-waste solutions are introduced to Iberostar hotels in all destinations, including potential suppliers, methods, and infrastructure innovation.

1.3
A comprehensive understanding of policies and regulations impacting waste management by hotels is established in all destinations, with targeted advocacy efforts implemented to support achieving net zero where needed.

1.2 Priority actions

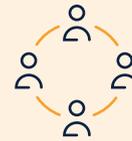

Destinations priorities

Map waste management priorities and stakeholders in destinations

Introduce innovative solutions, including sustainable suppliers

Identify and assess solutions that improve waste management

Community connection

Actively engage with the community in circular economy projects

Educate community stakeholders about waste management

Support local community waste management improvement initiatives

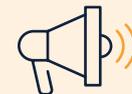

Collaborative partnerships

Establish multi-sector partnerships and collaboration agreements

Build regional networks to facilitate collaboration and knowledge sharing

Promote pre-competitive collaboration to share best practices

Advocacy and influence

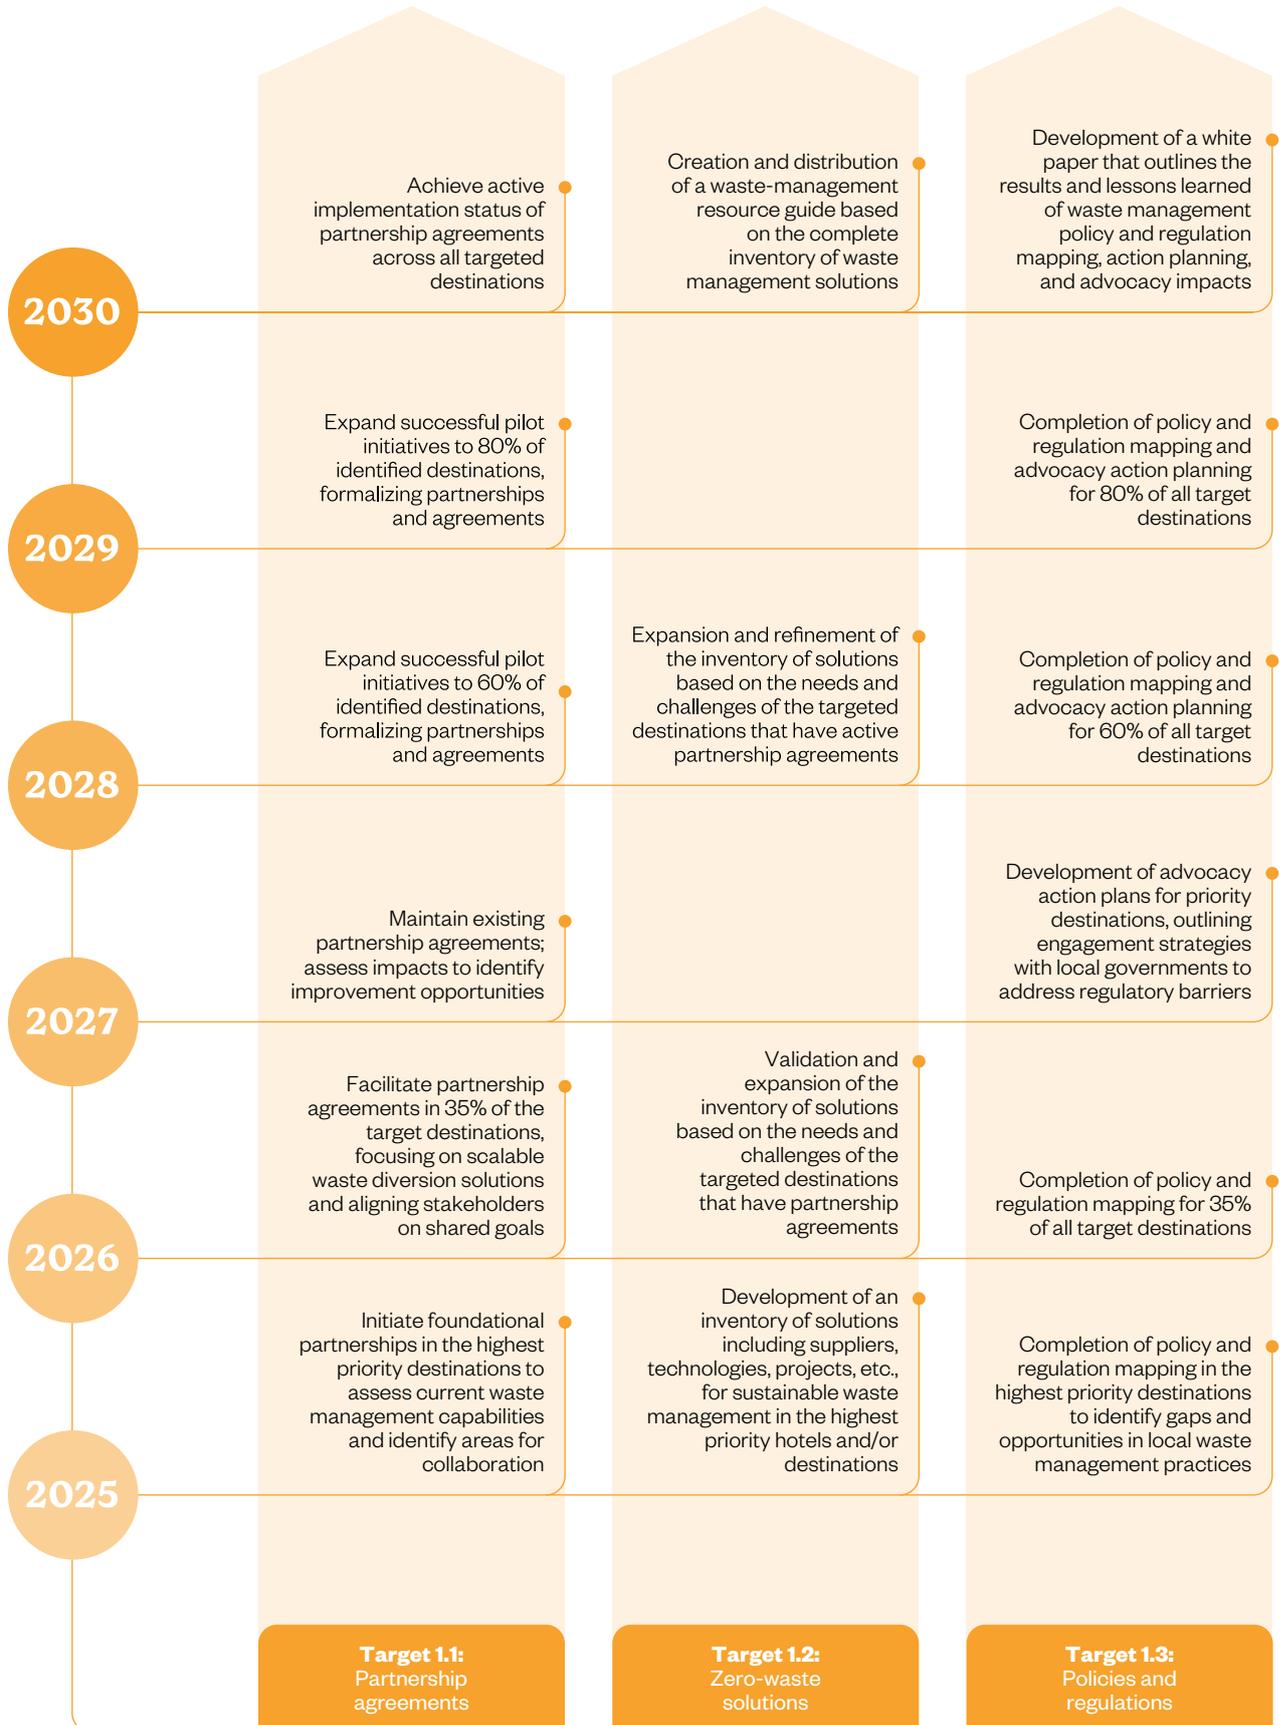

Understand waste-related policies and regulations of the destination

Identify opportunities to influence legislation

Partner with governments and other stakeholders to advance circular economy policies

Participate in sustainability forums and conferences, promoting the adoption of zero waste models

1.3 Timeline

2

Sustainable water management and regenerating ecosystems

With over 90% of Iberostar hotels located along coastlines, protecting water resources and restoring ecosystems is vital for our operations and the health of destinations. Climate change and increasing pressure on water resources emphasize the need for innovative and collaborative solutions.

To address these challenges, Iberostar is developing a comprehensive **Water Management Strategy** that includes:

- A water quality protocol.
- Operational efficiency improvements.
- Water footprint reduction initiatives.

In parallel, we advance **nature-based solutions** to protect and restore critical ecosystems.

Notable initiatives include:

- The **Coral Lab** in the Dominican Republic, which

leads cutting-edge coral restoration.

- A **mangrove reforestation program**, enhancing coastal resilience and community involvement.

- The **Coastal Dune Restoration Corridor** in Mexico, established in partnership with multi-sector organizations.

- Collaboration with the **IUCN** in Tunisia through the **Blue Tourism Initiative**, promoting biodiversity and sustainable beach management.

The DS Team integrates these innovative solutions into hotel operations, coordinates cross-departmental efforts, and participates in ecosystem conservation initiatives beyond Iberostar properties. By supporting entire destination ecosystems, we aim to set a benchmark for sustainable tourism that preserves vital natural resources and benefits local communities.

2030 Nature strategy

Restoring ecosystem services for risk reduction and mitigation

Enhancing the quality of beaches and water for destinations

Enhancing green spaces for wellbeing

2.1

2030 Targets

Pre-competitive partners in all destinations receive Iberostar guidance resources for water and ecosystem revitalization solutions, prioritizing those with higher risk.

Sustainable water management and ecosystem restoration systems are presented to hotels in places where the risk of flooding, sea level rise, fire, and drought have been identified.

Participation in multi-sector ecosystem regeneration and conservation initiatives in 80% of destinations.

2.2

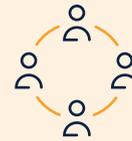

Priority actions

Destinations priorities

Map water and ecosystem priorities and stakeholders in destinations

Identify, assess, and propose water management and ecosystem restoration solutions for Iberostar and pre-competitive partner properties

Community connection

Engage and inform community members about ecosystem restoration and water management projects

Participate in discussions, workshops, and conferences

Support local programs that strengthen local capacity and resources

Collaborative partnerships

Strengthen local multi-sector alliances through collaboration

Establish and/or participate in advisory committees

Create co-management strategies for water management and/or ecosystem restoration

Secure permits and negotiate conditions to perform nature-based solution projects

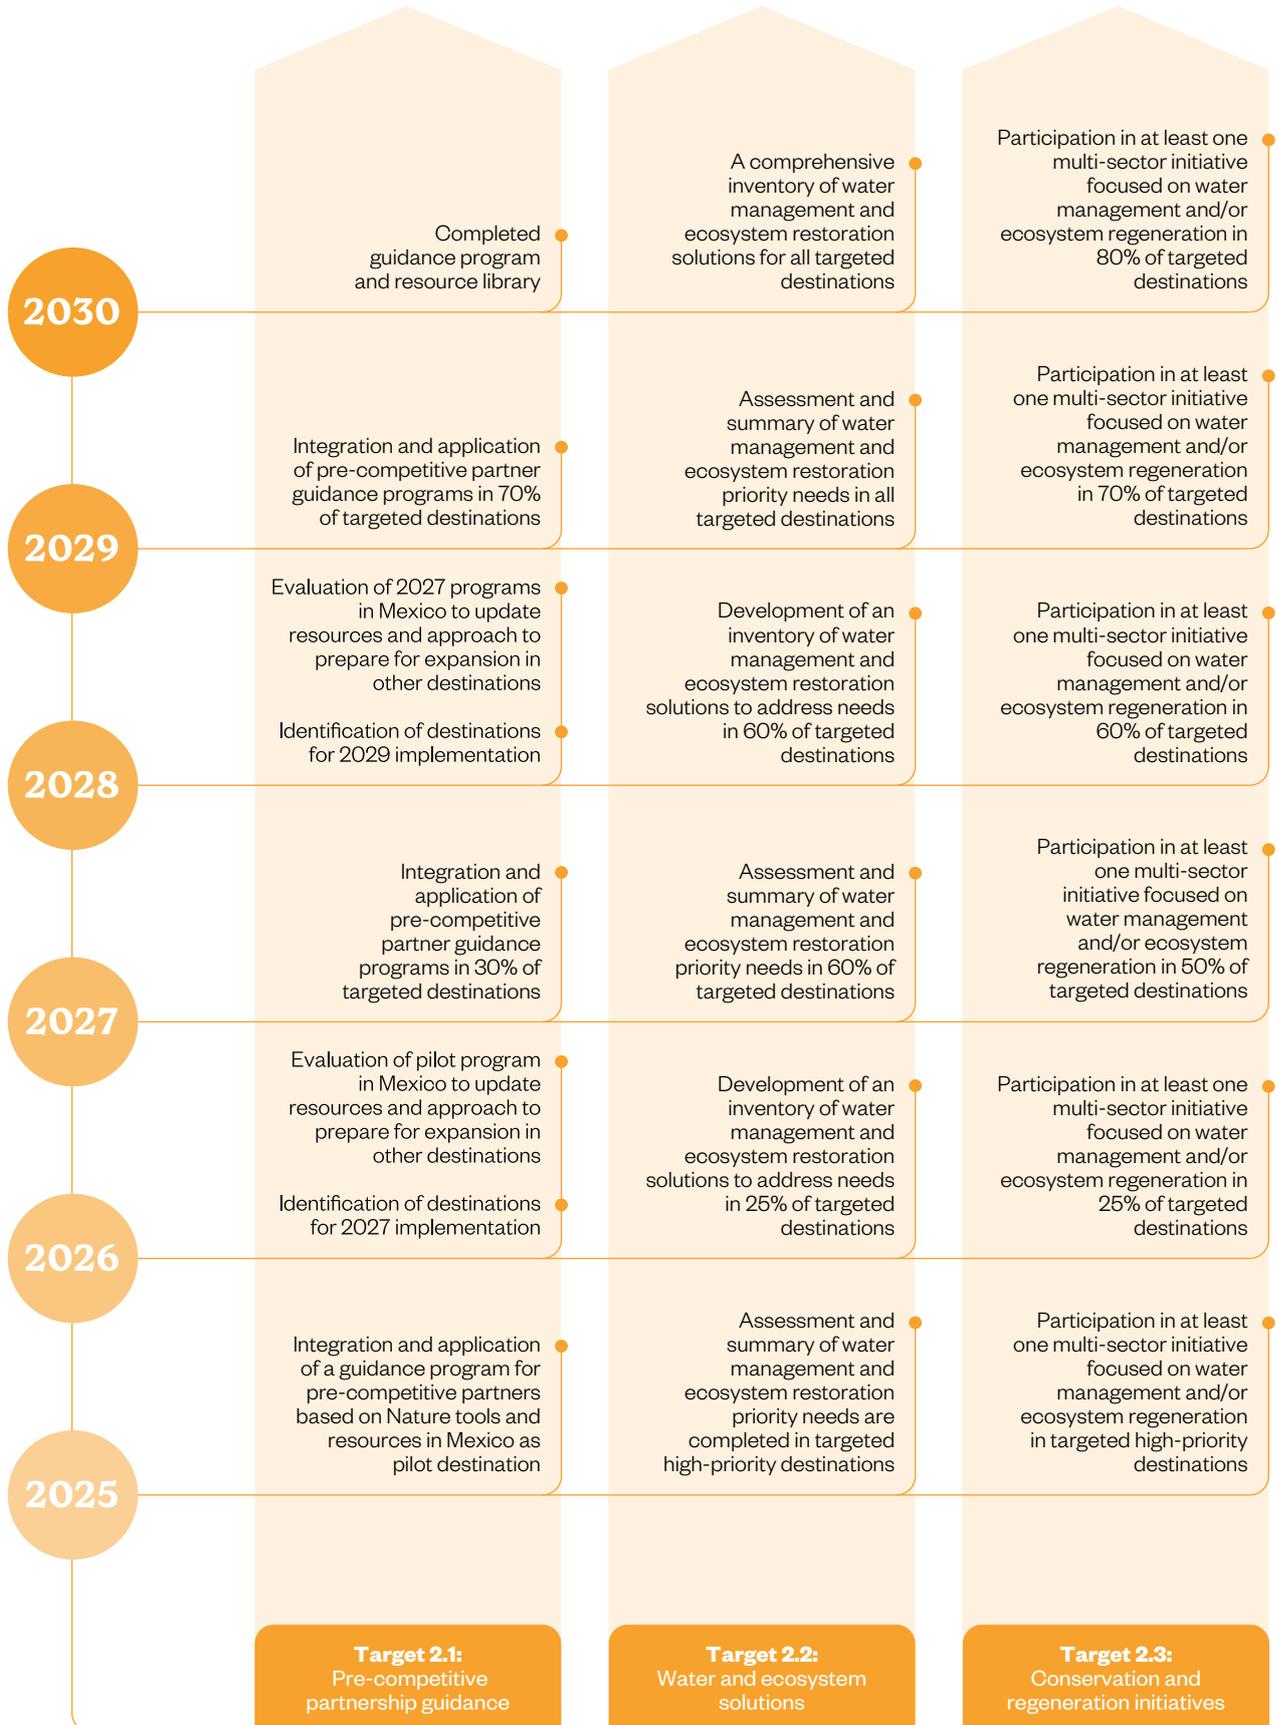

Advocacy and influence

Understand destination policies and regulations related to water management and ecosystem health

Co-champion advocacy efforts with multi-sector partners to improve policies that impact water and ecosystem health

Promote ecosystem support initiatives and good practices globally

2.3 Timeline

3

Accelerating decarbonization and climate resilience

Achieving **carbon neutrality by 2030** is a core objective of Iberostar's sustainability strategy. As climate change and energy challenges intensify, effective carbon management is crucial for reducing emissions and building resilient destinations.

Guided by the **Decarbonization Roadmap**, our strategy focuses on:

- Reducing energy consumption.
- Transitioning to renewable energy sources.
- Developing **nature-based carbon capture projects**.

Key initiatives include:

- Electrification of buildings and processes to

reduce fuel consumption.

- Advancing **waste-to-energy** projects.
- Partnering with local communities on forest management and regenerative agriculture.

The DS Team will address regional challenges by advocating for policy changes, leading partnerships, and identifying high-potential projects in regions with limited infrastructure or regulatory support. By promoting renewable energy adoption and community-based carbon compensation projects, Iberostar aims to demonstrate how hotels can contribute to global decarbonization and climate resilience.

2030 Climate Action strategy

Decarbonizing the built environment and destinations (Scope 1 and 2)

Decarbonizing the value chain (Scope 3)

Climate adaptation

3.1 2030 Targets

3.1
At least 30% of carbon projects are co-developed with local communities, supporting Climate Action team targets.

3.2
Decarbonization tools, resources, and training co-created by industry partners, suppliers, and governments are effectively shared through a robust distribution system in all destinations.

3.3
Active participation with local stakeholders in community-inclusive climate resilience initiatives in all destinations, focused on landscape-level solutions.

3.2 Priority actions

Destinations priorities

Identify potential carbon projects and share with the Climate Action department

Assess and introduce clean energy alternatives to hotels and partners

Assess and introduce destination resilience solutions

Collaborative partnerships

Create and share decarbonization guidance with public and private sector partners through collaborative knowledge exchange

Participate in multi-stakeholder collaborations

Enable partnership development with local low-carbon service and product providers

Community connection

Engage local communities in carbon capture projects

Strengthen community resilience programs

Promote community-based renewable energy initiatives

Participate in local climate change awareness and action events and programs

Advocacy and influence

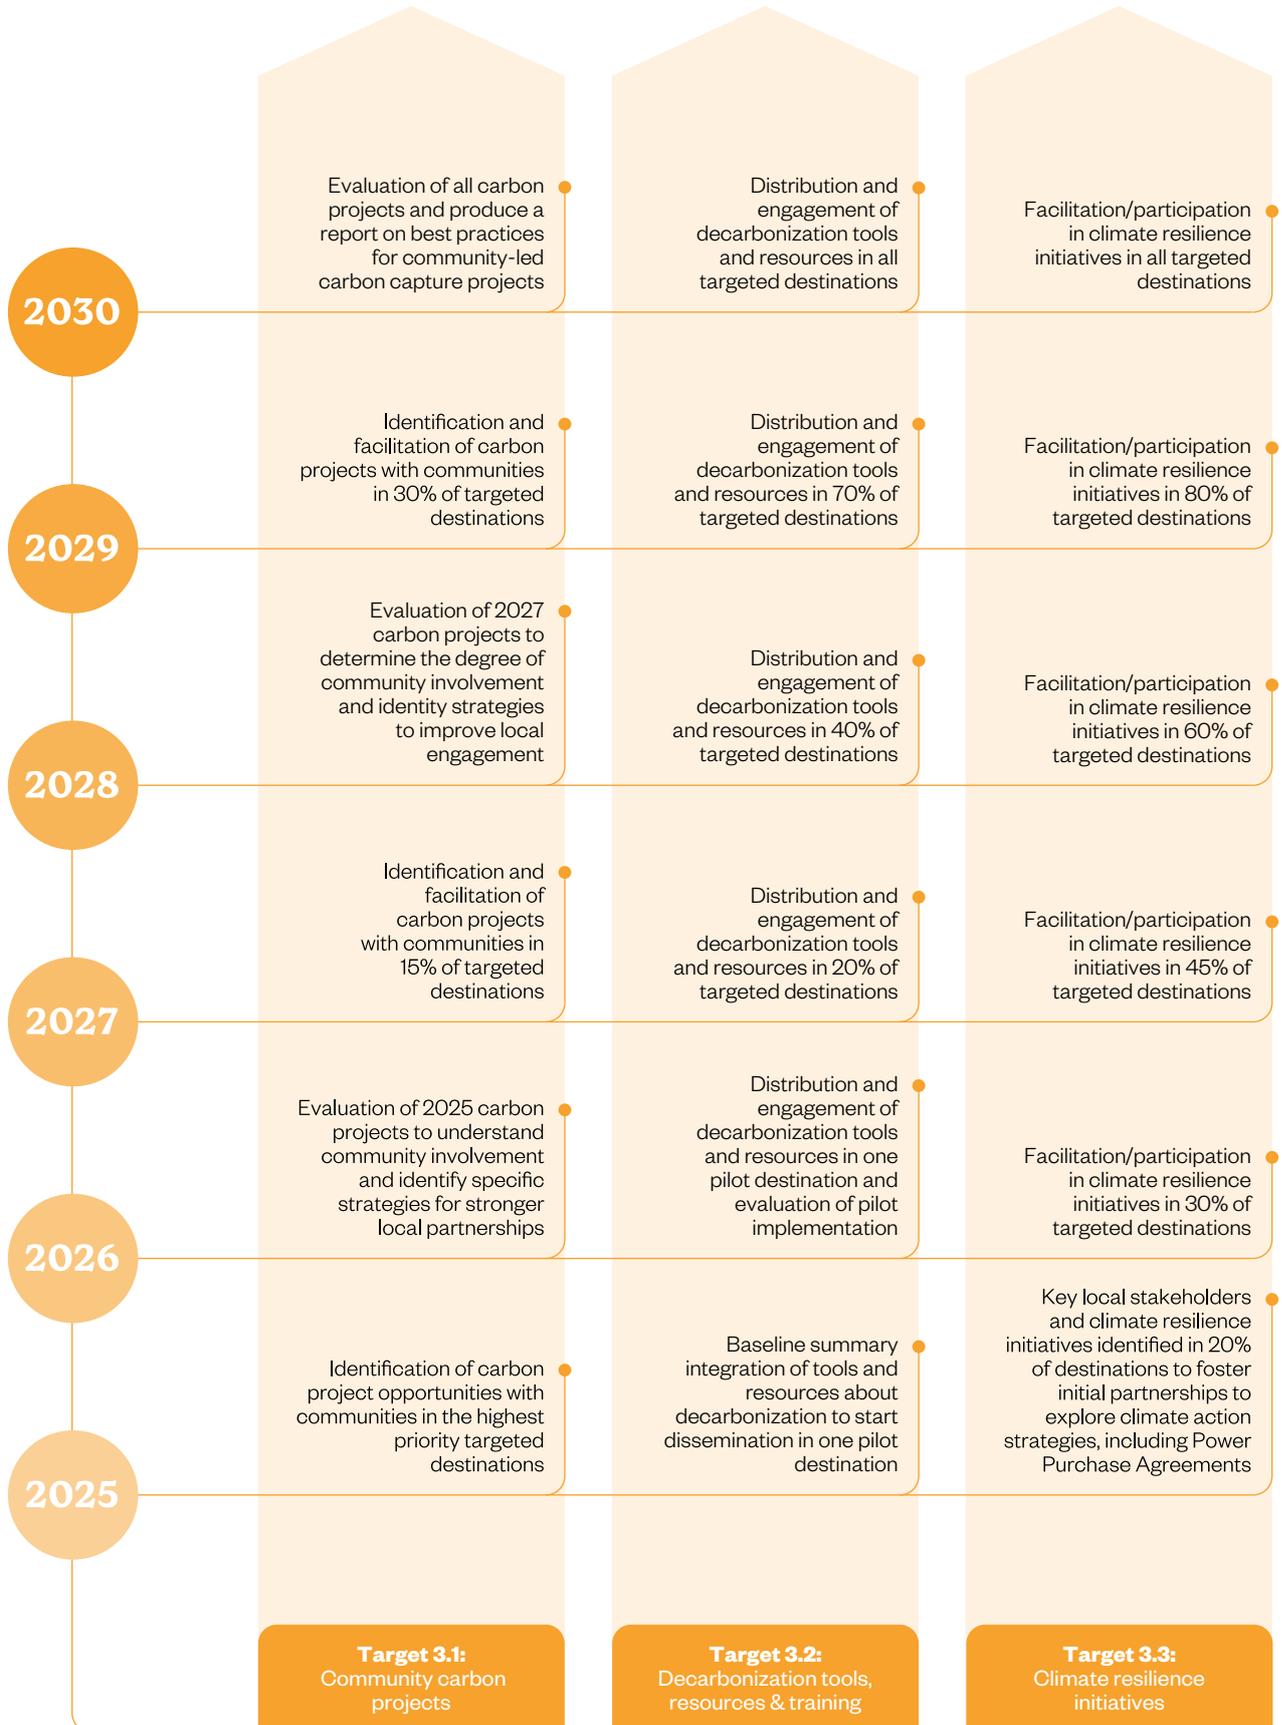

Understand destination policies and regulations related to climate action

Join initiatives that advocate for climate action

Promote policy revisions for renewable energy

Raise public awareness of climate issues

3.3 Timeline

4

Fostering regenerative destinations

Regenerative tourism lies at the heart of Iberostar's destination stewardship strategy. This approach ensures tourism not only minimizes negative impacts but actively enhances the environment, communities, and local economies.

Inspired by our work in **Blue Foods**, Iberostar's regenerative efforts include:

- Collaborating with local suppliers to sustainably source food.
- Educating communities about sustainable products and practices.
- Strengthening community resilience through sustainable operations and supply chains.

Notable initiatives include:

- The **Lifting Up Local (LUL) program** in Tunisia

and Brasil, which partners with small-scale fishers to promote underutilized fish species, supporting livelihoods and enriching guest experiences.

- Partnerships with local hospitality schools to align education with industry needs and boost employability.
- Conservation programs in Aruba, such as efforts to protect the endangered **Shoco Owl** through a sanctuary where burrows were installed to promote this species reproduction.

The DS Team, in collaboration with the Iberostar Foundation and other departments, will expand these initiatives to strengthen partnerships, align operations with local needs, and create scalable models for global application.

2030 Blue Foods strategy

Defining a path towards sustainable seafood

Improving supply chain traceability

Expanding Lifting up Local communities

Exploring alternative blue foods

4.1 2030 Targets

4.1
Leadership and influence in sustainable tourism policies and initiatives through global or regional public-private partnerships, with an active role in advisory bodies to drive impactful industry solutions.

4.2
A model inspired by Lifting Up Local is introduced in all destinations to build supplier capacity to offer sustainable, community-based products and services.

4.3
A destination stewardship framework and guidance resource for hotels is co-designed and shared across the tourism industry for global awareness and adoption.

4.2 Priority actions

Destinations priorities

- Conduct** Materiality Assessments with stakeholders
- Co-create** tools and resources based on materiality assessments
- Assess** local policy and infrastructure needs
- Map** local value chains
- Evaluate** social and environmental impacts
- Create** destination-specific action plans

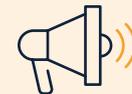

Collaborative partnerships

- Identify** community-based products and services
- Form** partnerships with industry and stewardship stakeholders
- Participate in or help create** local destination stewardship committees
- Actively contribute** ideas to regional and global advisory bodies
- Maintain** an up-to-date stakeholder map for potential partnerships
- Invest** in local capacities through sharing knowledge and expertise

Community connection

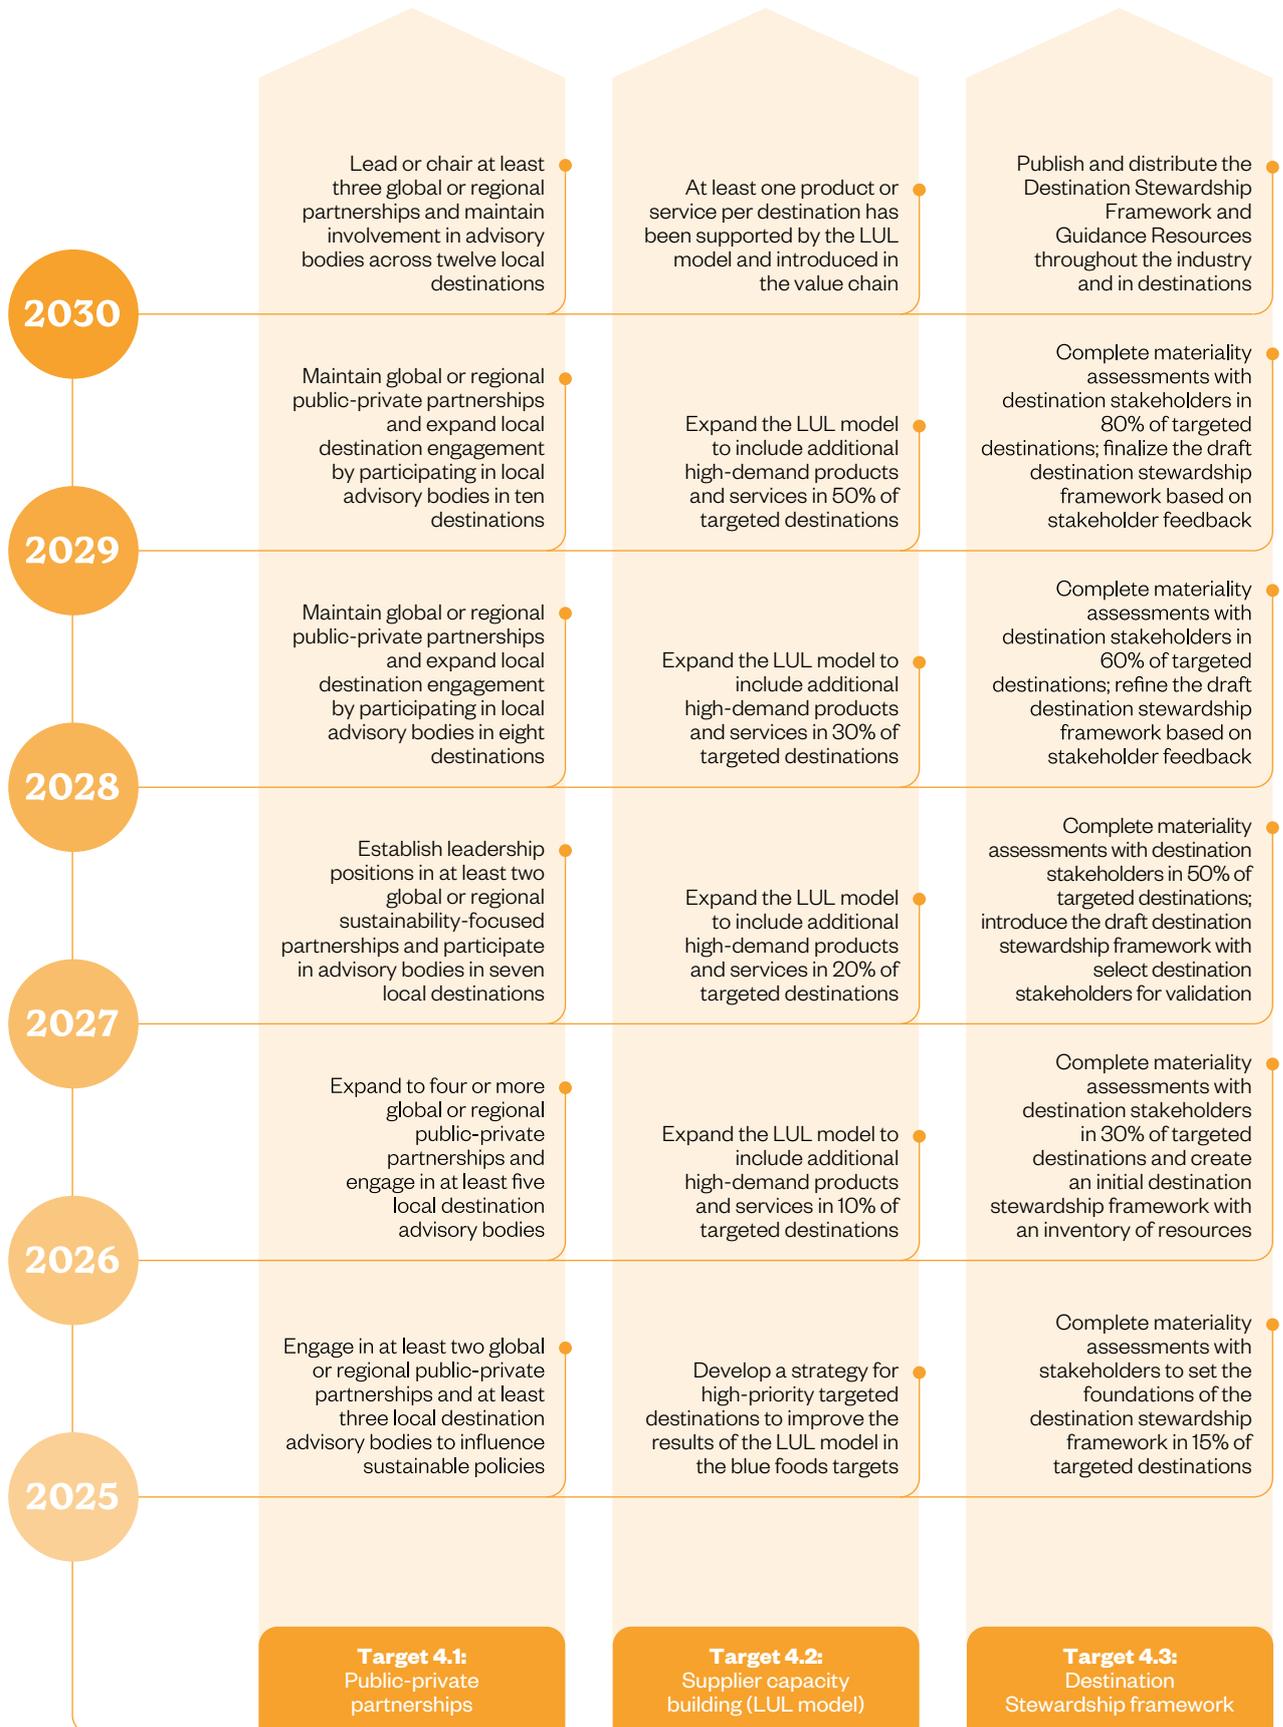

- Engage** in community tourism initiatives and events
- Create** formal and informal local sourcing network relationships
- Promote** community-based tourism enterprises
- Host** supplier engagement forums
- Share** knowledge with local stakeholders

Advocacy and influence

- Research** policies that enable or hinder regenerative solutions
- Create** customized advocacy strategies for regenerative policies
- Form** strong working relationships with governments at all levels
- Summarize** key lessons about destination stewardship annually

4.1 Timeline

The journey ahead

Over the next five years, the DS Team will deepen its understanding of the complex challenges

facing destinations and facilitate the exchange of solutions, resources, and collaborative actions.

Our focus will be on:

Integrating regenerative tourism practices

Promoting the responsible use of natural resources

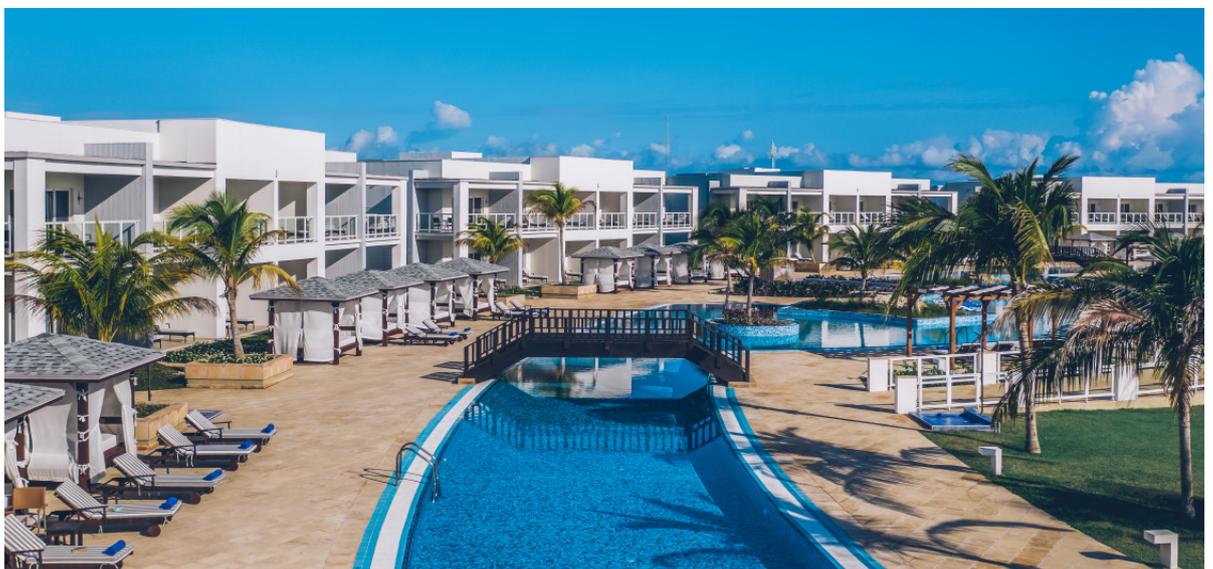

Advocating for policy reforms

Building strong partnerships

Addressing local challenges to ensure that destinations thrive in harmony with their environment

As a connector between Iberostar and external stakeholders, the DS Team will drive positive change across the tourism sector and support other departments in achieving shared goals of environmental conservation, social well-being, and sustainable development.

This roadmap aligns with Iberostar's broader strategies in circular economy, nature, blue foods, and climate action. We hope it inspires the travel and tourism industry to champion sustainable practices and destination stewardship worldwide.

Annexes

IBEROSTAR
GROUP

Annex I: Glossary of terms

Advisory bodies: Committees or councils composed of experts and stakeholders that provide strategic guidance and recommendations on specific issues, such as sustainability or destination management.

Blue foods: Foods derived from marine and freshwater environments, including fish, crustaceans, and seaweed, that are harvested in a sustainable and responsible manner.

Carbon neutrality: Achieving a balance between the amount of carbon emitted and the amount removed from the atmosphere, resulting in a net-zero carbon footprint.

Circular economy: An economic system aimed at eliminating waste and promoting the continual use of resources through principles of reducing, reusing, and recycling.

Climate resilience: The ability of systems, communities, and environments to withstand and adapt to climate change impacts, such as extreme weather events or sea-level rise.

Community-based tourism: Tourism that is owned, managed, or led by local communities, ensuring that tourism benefits are shared equitably and contribute to local development.

Decarbonization: The process of reducing carbon dioxide and other greenhouse gas emissions, primarily through energy efficiency, renewable energy adoption, and carbon capture projects.

Destination: The geographic region characterized by shared stakeholders, institutions, legislation and environmental and social status.

Destination stewardship: A collaborative approach to managing destinations that balances economic, environmental, social, and cultural needs, ensuring tourism benefits both people and the environment.

Ecosystem restoration: Actions to recover and rehabilitate degraded ecosystems, such as mangroves, coral reefs, or wetlands, to restore biodiversity and ecosystem services.

LEED certification: A globally recognized certification for buildings that meet high standards in sustainability and energy efficiency.

Lifting Up Local framework: An Iberostar initiative aimed at empowering local suppliers and communities by integrating sustainable, community-based products and services into hotel operations.

Materiality assessments: A process to identify and prioritize the social, environmental, and economic issues that are most critical to an organization and its stakeholders.

Nature-based solutions: Actions that use natural systems, such as ecosystems restoration or sustainable land management, to address environmental, social, and economic challenges.

Power purchase agreement: (PPA) is a long-term contract between two parties: a power producer, typically generating electricity from renewable sources (such as solar, wind, or hydropower), and an offtaker, who may be a consumer, utility, or energy trader. This agreement governs the sale and purchase of electricity at pre-agreed terms and conditions, including pricing, duration, and delivery obligations.

Pre-competitive collaboration: Cooperation between businesses and stakeholders on sustainability challenges in areas that are not considered directly competitive, allowing for shared solutions and industry-wide progress.

Public-private partnerships (PPPs): Collaborations between government agencies and private-sector companies to achieve shared goals, often used for infrastructure, policy development, and sustainability initiatives.

Regenerative tourism: A holistic approach to tourism that goes beyond minimizing negative impacts to actively improving the environmental, social, and economic conditions of the destinations.

Science-Based Targets Initiative (SBTi): An international framework for setting greenhouse gas emission reduction targets that are in line with the latest climate science.

Sustainable water management: The use of water resources in a way that meets current demand without compromising the ability of future generations to meet their needs, often involving efficiency, reuse, and conservation strategies.

Zero waste: A goal to ensure that no waste generated by operations is sent to landfills or incinerators, instead being repurposed, reused, or recycled.

Annex II: Key Performance Indicators

The following table presents Key Performance Indicators (KPIs) for each focus area target included in the Destination Stewardship

Roadmap. KPIs are organized by measurements of action (progress) and impact (outcomes).

Focus area 1:

Achieving zero waste through circular economy solutions

Target 1.1: Partnership agreements with other hotels, NGOs, and/or local governments

Action KPIs:

Number of meetings held with potential partners (government, NGO, private)
 Number of partnership agreements proposed/negotiated in each destination
 Number of partnership agreements signed in each destination
 Number of collaborative waste management projects initiated
 Number of joint initiatives developed or planned
 Percentage of hotels involved in partnership initiatives

Impact KPIs:

Percentage reduction in waste to landfill
 Percentage of total waste diverted from landfills through partnership initiatives
 Reduction in waste management costs due to collaborative efforts
 Percentage increase in waste recycled or composted as a result of partnerships
 Qualitative feedback from partners on the effectiveness of collaborations

Target 1.2: Explore and present zero waste solutions

Action KPIs:

Number of zero-waste solutions identified for each destination
 Number of potential suppliers and implementation partners identified
 Number of solutions formally presented to hotels
 Percentage of solutions reviewed and evaluated for feasibility
 Number of implementation plans developed for selected zero-waste solutions

Impact KPIs:

Percentage of zero-waste solutions implemented
 Number of hotels achieving zero waste to landfill
 Reduction in waste produced per guest or per hotel room
 Percentage reduction in single-use plastics
 Cost savings associated with zero-waste solutions implemented
 Feedback from hotel managers on the practicality of implemented solutions

Target 1.3: Understand policies and regulations impacting waste management

Action KPIs:

Number of regulatory analyses or policy briefs completed per destination
 Number of advocacy engagements (e.g., meetings, presentations) with policymakers
 Number of policy changes or amendments proposed
 Number of advocacy campaigns or events conducted
 Number of stakeholders involved in advocacy efforts

Impact KPIs:

Number of policy changes influenced or supported
 Reduction in regulatory barriers to zero-waste initiatives
 Percentage increase in government support for waste reduction projects
 Reduction in compliance costs for hotels due to policy changes
 Increase in public and stakeholder awareness of waste management issues

Focus area 2:
 Sustainable water management and regenerating ecosystems

Target 2.1: Present sustainable water management and ecosystem regeneration systems

Action KPIs:

Number of water management and ecosystem regeneration systems presented
 Number of destinations assessed for water and ecosystem risks
 Number of hotels trained on sustainable water management practices
 Number of proposals or case studies shared with hotels
 Percentage of hotels receiving recommended practices

Impact KPIs:

Reduction in overall water consumption per hotel
 Percentage of water recycled or reused at hotels
 Reduction in water withdrawal from high-risk areas
 Percentage of ecosystem areas restored or conserved
 Increase in ecosystem biodiversity in managed areas

Target 2.2: Provide guidance resources for water and ecosystem revitalization solutions

Action KPIs:

Number of guidance resources developed and distributed
 Number of training sessions or workshops conducted on water management
 Number of partners receiving guidance materials
 Number of high-risk destinations where guidance is implemented
 Percentage of hotels in high-risk areas adopting recommended practices

Target 2.3: Participate in multi-sector ecosystem restoration and conservation initiatives

Impact KPIs:

Reduction in water-related risks (e.g., flood or drought incidents)
 Increase in water efficiency per guest or hotel room
 Number of hectares of ecosystems restored
 Percentage of partners reporting positive impacts
 Change in stakeholder perception of water and ecosystem management

Action KPIs:

Number of multi-sector initiatives participated in
 Number of multi-stakeholder meetings or workshops attended
 Number of ecosystem restoration projects co-developed or supported
 Percentage of hotels in each destination engaged in these initiatives
 Number of new partnerships formed for ecosystem restoration

Impact KPIs:

Percentage of destinations involved in multi-sector ecosystem initiatives
 Increase in the number of restored or protected ecosystem areas
 Percentage improvement in water quality and soil health
 Reduction in natural disasters (floods, fires) in managed areas
 Increase in public and stakeholder support for ecosystem initiatives

Focus area 3:
 Accelerating decarbonization and climate resilience

Target 3.1: Ensure 30% of carbon projects are co-developed with local communities

Action KPIs:

Number of community consultations or workshops conducted
 Number of carbon projects co-designed with local communities
 Percentage of carbon projects with active community participation
 Number of community agreements signed for project co-development

Impact KPIs:

Percentage of carbon projects achieving the 30% local community co-development target
 Community satisfaction and perception of carbon projects
 Number of local jobs created through carbon projects
 Number of community-led climate resilience activities initiated
 Percentage of projects contributing to community development goals

Target 3.2: Share decarbonization tools, resources, and training

Action KPIs:

Number of decarbonization tools developed and shared
 Number of partners receiving training or resources
 Number of distribution channels used to share resources
 Number of downloads or access rates for shared resources

Impact KPIs:

Percentage increase in partner knowledge on decarbonization
 Percentage of partners applying shared tools in their operations
 Reduction in carbon emissions due to adopted tools
 Percentage of partners reporting increased capacity for decarbonization
 Change in partner or industry attitudes toward decarbonization

Target 3.3: Participate in community-inclusive climate resilience initiatives

Action KPIs:

Number of community-inclusive climate resilience projects initiated
 Number of local stakeholders engaged in climate resilience planning
 Number of landscape-level solutions implemented
 Number of new partnerships for community-inclusive resilience

Impact KPIs:

Reduction in climate vulnerability of targeted areas
 Increase in community resilience (measured through resilience assessments)
 Percentage of stakeholders reporting enhanced climate adaptation capacity
 Reduction in economic losses from climate impacts in engaged communities
 Increase in community participation in long-term climate resilience planning

Focus area 4:
 Fostering regenerative destinations

Target 4.1: Lead and influence sustainable tourism policies and initiatives

Action KPIs:

Number of advisory bodies or working groups with active participation
 Number of sustainable tourism policy recommendations developed
 Number of public-private partnerships initiated or supported
 Number of industry events or conferences participated in

	<p>Impact KPIs:</p> <ul style="list-style-type: none"> Reduction in water-related risks (e.g., flood or drought incidents) Number of policy recommendations adopted by the industry or governments Increase in industry adoption of sustainable tourism practices Percentage increase in sustainable tourism policies in destinations Increase in industry alignment with regenerative tourism principles
<p>Target 4.2: Introduce a capacity- building model for suppliers</p>	<p>Action KPIs:</p> <ul style="list-style-type: none"> Number of destinations with the Lifting Up Local-inspired model implemented Number of suppliers engaged in capacity-building programs Number of training sessions or workshops conducted Number of local products or services influenced through capacity-building efforts <p>Impact KPIs:</p> <ul style="list-style-type: none"> Percentage of suppliers offering sustainable products or services Percentage of suppliers reporting improved business performance Percentage of local supply chains strengthened Percentage of hotels sourcing from trained local suppliers
<p>Target 4.3: Co-design a destination stewardship framework</p>	<p>Action KPIs:</p> <ul style="list-style-type: none"> Number of destinations with completed materiality assessments Number of stakeholders and partners involved in the materiality assessment process Number of stakeholders involved in the co-design process Number of drafts and consultations for framework development Number of guidance resources or toolkits created for the framework Number of industry events or workshops to present the framework <p>Impact KPIs:</p> <ul style="list-style-type: none"> Number of hotels or destinations adopting the framework Percentage of industry stakeholders aligning with the framework principles Percentage increase in destination stewardship activities reported Increase in industry support for regenerative destination management
